5-Conclusion

March 15, 2021

Version 0.12

1 Thank you for visiting the Hack Shack

Powered by HPE DEV Team

2 Conclusion

In this workshop, you obtained a practical experience with different methods to use Ansible for Redfish management tasks in a Synergy and OneView environment. The first method was with the Ansible built-in `uri` method and the second with the HPE iLOrest library. Then, you had an overview of the Ansible Galaxy collection and its three Redfish modules. At the end of notebooks 2,3 and 4, you validated the portability of the code against two different types of servers (Synergy and rack-mount).

Congratulations!

3   Final step

3.0.1   Please take a moment to fill out our survey so we can ensure future workshops meet your needs.

3.0.2   And make sure you use `File->Log Out` to terminate your workshop session.

4   Thank you
