4-Conclusion

November 30, 2020

Version 0.31

1 Thank you for attending this workshop

Powered by HPE DEV Team

2 Conclusion

In this Redfish lab, you learned its basic architecture using simple `cURL` and/or `PowerShell` commands and simple Python instructions using DMTF's Redfish module. In addition concrete examples have been presented against different implementations so you can better understand the fundamental best practise saying that you should never assume a resource location.

Congratulations!
